

GitHub Contribution Guide

FPGA Station – Hardware Accelerators and Much More

This guide explains how to submit your assigned project to **FPGA Station** using GitHub. No prior GitHub experience is required.

Step 1: Create a GitHub Account

If you do not already have a GitHub account, create one at: <https://github.com>

Verify your email address after signing up.

Step 2: Open FPGA Station Repository

Repository Link: <https://github.com/koushikkalyani/FPGA-station>

Step 3: Fork the Repository

Click the **Fork** button in the top-right corner of the repository page. This creates your own copy of FPGA Station where you can upload your project.

Step 4: Upload Your Project

Open your forked repository and navigate to:

Project-Depot

Click **Add file** → **Upload files**

Create a folder using **your assigned project title** and upload all the project files into that folder. Or drag and drop your project folder directly into **Project-Depot**

Example:

Project-Depot/
└── TM_hardware_implementation/

After uploading, click **Commit changes**.

Use your **assigned project title** as the commit message.

Example:

TM_hardware_implementation

Step 5: Create a Pull Request

After committing your project, click:

Contribute → **Open Pull Request**

Review your changes and click **Create Pull Request**.

Use your **assigned project title** as the Pull Request title.

Example:

TM_hardware_implementation

Submission Checklist

- ✓ Project uploaded inside **Project-Depot**
 - ✓ Folder name matches the assigned project title
 - ✓ Commit message matches the assigned project title
 - ✓ Pull Request title matches the assigned project title
 - ✓ Pull Request submitted successfully
-

Thank you for contributing to **FPGA Station!**  Every contribution helps build a growing collection of hardware projects.
